1. (1 point) What is the derivative of $f(x) = x^2 e^{3.9x}$, evaluated at $x = 0.56$?
2. (1 point) Given the following information:

	+		+		=	167
	+		+		=	425
	+		+		=	839

Compute:

	+		+		=	?
---	---	---	---	---	---	---

3. (1 point) A machine fills milk into 250ml packages. It is suspected that the machine is not working correctly and that the amount of milk filled differs from the setpoint $\mu_0 = 250$. A sample of 180 packages filled by the machine are collected. The sample mean \bar{y} is equal to 264.7 and the sample variance s_{n-1}^2 is equal to 59.92.

Test the hypothesis that the amount filled corresponds on average to the setpoint. What is the value of the t test statistic?

- (a) 28.205
 - (b) 10.565
 - (c) 25.478
 - (d) 14.845
 - (e) 21.108
4. (2 points) The waiting time (in minutes) at the cashier of two supermarket chains with different cashier systems is compared. The following statistical test was performed:

Two Sample t-test

data: Waiting by Supermarket

t = 0.072076, df = 111, p-value = 0.4713

alternative hypothesis: true difference in means between group Sparag and group Consumo is greater

95 percent confidence interval:

-1.025379 Inf

sample estimates:

mean in group Sparag	mean in group Consumo
4.939971	4.893391

Which of the following statements are correct? (Significance level 5%)

- (a) The absolute value of the test statistic is larger than 1.96.
- (b) A one-sided alternative was tested.
- (c) The p value is larger than 0.05.
- (d) The test shows that the waiting time is longer at Sparag than at Consumo.
- (e) The test shows that the waiting time is shorter at Sparag than at Consumo.

5. (2 points) In the following figure the distributions of a variable given by two samples (A and B) are represented by parallel boxplots. Which of the following statements are correct? (Comment: The statements are either about correct or clearly wrong.)

- (a) The location of both distributions is about the same.
 - (b) Both distributions contain no outliers.
 - (c) The spread in sample A is clearly bigger than in B.
 - (d) The skewness of both samples is similar.
 - (e) Distribution A is about symmetric.
6. (3 points) What is the name of the R function for extracting the estimated covariance matrix from a fitted (generalized) linear model object?
