Exam: 15072900002

- 1. (1 point) What is the derivative of $f(x) = x^9 e^{2.6x}$, evaluated at x = 0.5?
- 2. (1 point) Given the following information:

Compute:

3. (1 point) A machine fills milk into 1000ml packages. It is suspected that the machine is not working correctly and that the amount of milk filled differs from the setpoint $\mu_0 = 1000$. A sample of 176 packages filled by the machine are collected. The sample mean \bar{y} is equal to 983.4 and the sample variance s_{n-1}^2 is equal to 2939.82.

Test the hypothesis that the amount filled corresponds on average to the setpoint. What is the value of the *t* test statistic?

- (a) 59.802
- (b) 65.873
- (c) -4.062
- (d) 32.290
- (e) -68.232
- 4. *(2 points)* The waiting time (in minutes) at the cashier of two supermarket chains with different cashier systems is compared. The following statistical test was performed:

Two Sample t-test

data: Waiting by Supermarket
t = 0.016793, df = 111, p-value = 0.4933

alternative hypothesis: true difference in means between group Sparag and group Consumo is great 95 percent confidence interval:

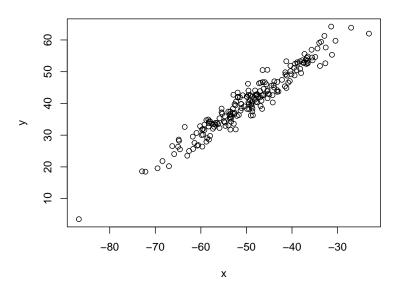

-1.013614 Inf
sample estimates:

mean in group Sparag mean in group Consumo 6.143942 6.133575

Which of the following statements are correct? (Significance level 5%)

- (a) The absolute value of the test statistic is larger than 1.96.
- (b) A one-sided alternative was tested.
- (c) The *p* value is larger than 0.05.
- (d) The test shows that the waiting time is longer at Sparag than at Consumo.
- (e) The test shows that the waiting time is shorter at Sparag than at Consumo.

5. *(2 points)* The following figure shows a scatterplot. Which of the following statements are correct?

- (a) The absolute value of the correlation coefficient is at least 0.8.
- (b) For X = -49.2, Y can be expected to be about 40.8.
- (c) The scatterplot is standardized.
- (d) The mean of Y is at least 30.
- (e) The standard deviation of X is at least 6.
- 6. *(3 points)* What is the name of the R function for extracting the estimated covariance matrix from a fitted (generalized) linear model object?
